

Disaster Recovery as a Service

IPC

The industry's first cloud-based service that provides a complete turnkey solution for voice trading Business Continuity

Cloud9

Solution sheet

An annual protection plan.

Planning for an unforeseen disaster is the last thing that a busy financial services firm should have to invest time and capital in. Without knowing the severity and nature of an event there is an argument that investing in redundant infrastructure is impractical and unlikely to achieve the desired business result.

Even if your infrastructure is reliable, what if your trading counterparties are offline or your employees can't get to the office?

With Disaster Recovery as a Service (DRaaS), IPC and Cloud9 have introduced a cloud-based service that provides a complete turnkey solution for voice trading disaster recovery. DRaaS leverages IPC's global financial ecosystem and Cloud9's C9 Trader platform to extend voice trading capabilities to alternative locations without needing to notify your counterparties.

- Access to all trader voice circuits from any location via the public Internet
- Supports dedicated BCP sites, or temporary unplanned locations during early business restoration
- Provides a full featured and customized soft turret interface that can be installed on any Windows PC or Tablet
- Hardware device options offer a turret-like end-user experience during disaster scenarios
- Integral voice recording solution for compliant remote trader communications, options to integrate with a dedicated BCP office call logger system
- The DRaaS service can be deployed regardless of whether a firm uses an IPC, third-party or a PBX voice platform

Counterparty Business Continuity Service:

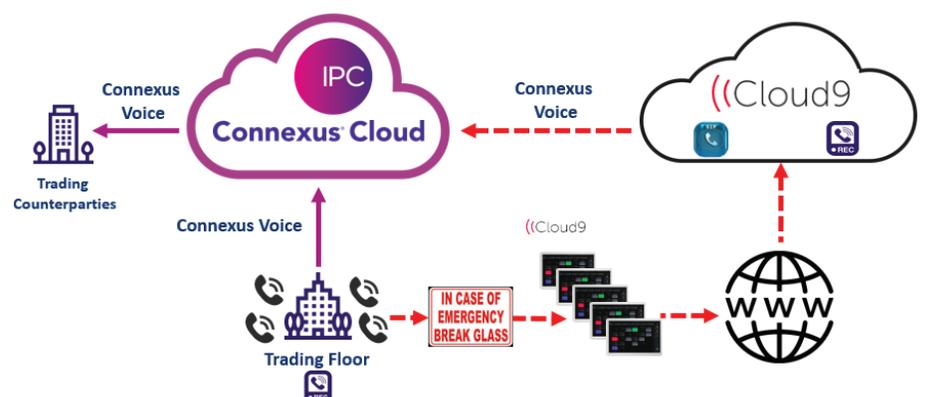

Disaster Recovery as a Service (DRaaS) is a cloud-based service that allows traders to move to any alternate trading site and keep their counterparty community available. No need to notify your trading partners of new numbers and no reprogramming buttons.

The DRaaS service starts with the IPC and Cloud9 pro-services teams reviewing all of a firm's voice trading infrastructure and designing a custom BCP solution. The custom-designed BCP solution enables a firm to provide their traders with the same professional voice trading functionality anywhere in the world. Each client's BCP plan is self-managed and is "always on," whether the event is regional or global in nature.

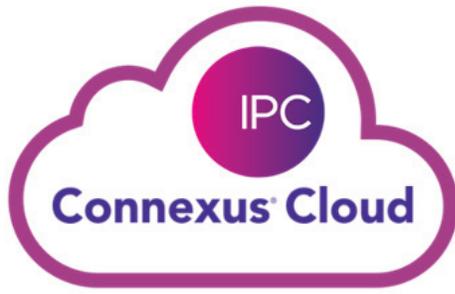

As leaders in voice trading communications, IPC and Cloud9 have combined technologies and support organizations to provide the financial markets with a high availability and cost effective BCP solution.

Features:

- SaaS Solution – No capital requirements with minimal start-up costs
- Cloud Solution – Risk-free first step towards cloud-based voice trading
- Professional Voice Trading – Includes a fully configured trading desk interface, voice recording and counterparty connectivity
- Compliant and Secure – Supports BCP site call logger integration or cloud-based options
- Always on BCP – Transition from production to BCP in seconds
- Proven Technology – Industry proven technologies from IPC and Cloud9

ABOUT CLOUD9 TECHNOLOGIES

Cloud9 Technologies is a cloud communications service provider that provides high performance voice and collaboration services designed for the unique needs of distributed work groups and teams. The company delivers its services from the cloud using software applications that leverages the Internet and advanced WebRTC technologies.

In the financial industry, Cloud9 connects parties and counterparties across all asset classes via a cloud-based voice platform that features end-to-end security, encryption and unique data. Cloud9 eliminates the infrastructure and expense associated with legacy turret systems and telecommunication services associated with trader voice. Our customer base includes top brokerages, sell-side firms and tier one banks.
